ON THE REGULARITY OF MILD SOLUTIONS TO COMPLETE HIGHER ORDER DIFFERENTIAL EQUATIONS ON BANACH SPACES.

Nezam Iraniparast and Lan Nguyen

Abstract. For the complete higher order differential equation $u^{(n)}(t) = \sum_{k=0}^{n-1} A_k u^{(k)}(t) + f(t)$, $t \in \mathbb{R}$ (*) on a Banach space $E$, we give a new definition of mild solutions of (*). We then characterize the regular admissibility of a translation invariant subspace $M$ of $BUC(\mathbb{R}, E)$ with respect to (*) in terms of solvability of the operator equation $\sum_{j=0}^{n-1} A_j XD^j - XD^n = C$. As application, almost periodicity of mild solutions of (*) is proved.
